| Florida Maple | Sand Pine | Winged Elm |
| Flowering Dogwood | Slash Pine | |
| Laurel Oak | Southern Catalpa | (40 of 50 contest tree species) |

The Baker County Arboretum was designed with the FFA Forestry Contest in mind, selecting tree species from the dendrology practicum list. Since 2011, the Extension Office has hosted many student groups to study tree identification in the arboretum. With advanced notice, mock examinations can be set up to prepare students for the contest and are typically followed by a tour to discuss each tree species. Please contact our office by phone or email (listed above) to schedule a visit. Special arrangements must be made for visits during evenings, weekends, and holidays. See the 'Plan Your Visit' page of our website for more information.
