Many Americans have food allergies and are affected by food allergens when a specific food is eaten. Food allergies occur when the body’s immune system reacts to certain proteins in food. Food allergies are a growing food safety and public health concern. There is no cure for food allergies.

Some allergic reactions are very serious and can be life threatening.

The symptoms and severity of allergic reactions to food can differ between individuals and can also be different for one person over time. Symptoms of food allergies usually appear from a few minutes to a few hours after a person has eaten the food to which he/she is allergic. Symptoms of allergic reactions may include but are not limited to hives, rash, tingling or itchy sensation in the mouth, vomiting, diarrhea, abdominal cramps, coughing, wheezing, difficulty breathing, and/or loss of consciousness.

*Early recognition of signs and symptoms and learning how to manage food allergies, including which foods to avoid, are important measures to prevent serious health consequences.*

Did you know there is now a proposed 9th major food allergen?

The 9th allergen is SESAME. This will be added to the eight existing food allergens listed above. The first “Food Allergen Labeling and Consumer Protection Act” of 2004 (FALCPA) was passed to recognize the “Big 8 major food allergens”. On April 23rd, 2021, a law was passed with a different name- “The Food Allergy Safety, Treatment, Education, and Research (FASTER) Law” to recognize the 9th allergen (sesame) and the enforcement will be effective on January 1, 2023.

The Food and Drug Administration (FDA) enforces regulations requiring companies to list ingredients on packaged foods and beverages. When problems are found, the FDA works with companies to recall products and provide public notification to immediately alert consumers.

*People with food allergies should carefully read labels, stay alert to consumer notifications, ask questions about food preparation when dining out and avoid eating the foods they are allergic to.*
