Sarasota County Fair
Swine
Project Book

Exhibitor Name_________________________ Project Year_______
Date of Birth___________________ Age (at Sept. 1) ______ Grade_____
Club / Chapter_____________________________________________
Years in this project_________________________________________

I hereby certify, as the exhibitor of this project, I personally have kept records on this project and have personally completed this Project Book to the best of my ability.

Signed ________________________________  Date ___________
Exhibitor’s Signature

I hereby certify that that my son/daughter has completed this project and record book and will comply with all the Rules and Regulations of this Fair.

Signed _________________________________  Date __________
Parent/ Guardian Signature
Swine Exhibitor Project Agreement

(NOTE: THIS PAGE MUST BE SIGNED AND VERIFIED BY FIRST WEIGH-IN)

The youth is responsible for caring for the animal, which will include feeding, deworming, providing fresh clean water, providing a pen, and showing. The youth will use this project as an educational tool to learn skills needed in the livestock industry. This project also will help the youth to accept success and failure as a learning experience. The youth will keep accurate records on their project animal.

I accept these responsibilities.

__________________________________________________________________
Date   Signature of Exhibitor

The parents are responsible for providing financial help, if needed, along with assistance and encouragement while the youth is raising this animal.

I accept these responsibilities.

__________________________________________________________________
Date   Signature of Parent/Guardian

Drug Statement

I hereby certify that any drug or antibiotic substance which may be administered by me or any other person will be done so in strict compliance with the manufacturer’s label requirements.

__________________________________________________________________
Date   Signature of Exhibitor

__________________________________________________________________
Date   Signature of Parent/Guardian

The above signatures Verified by ________________________________

4-H Leader/ FFA Advisor   Date

Purpose

The purpose of a market animal project is to achieve the following:
- To acquire an understanding of the animal industry by preparing for, purchasing, caring for, and keeping records on 1+ head of animals.
- To be able to identify the types and breeds of animals and employ efficient methods of production and marketing.
- To understand the business aspects and economics of purchasing animals, feed, facilities, and equipment for an animal project.
- To develop integrity, sportsmanship, and cooperation.
- To develop leadership abilities, build character, and become responsible citizens.
PERFORMANCE OBJECTIVES OF SWINE PROJECTS

To aid in the development of youth into responsible citizens by:
- Teaching responsibility through working with animals that depend on the members to provide proper feed and care. Teaching the value, use, and management of money through its investments in animals, feed, equipment, and receiving a return on its investment.
- Teaching sportsmanship and cooperation through participation in shows and working with other members.

To help young people gain an appreciation for:
- The place of livestock in agriculture and its contribution to people. The importance of proper growth and development of market animals.

To help young people gain skills in:
- Selecting the kind of animal that will make rapid, efficient gains and produce a high-quality product.
- Feeding animals for optimum growth and proper development. Grooming and showing market swine.
- Keeping records.

GENERAL INFORMATION

- At the initial weigh-in in December, you do not need a trailer certificate or health certificate. Your pig will be weighed if you request and given an ear tag for proper identification.
- When you bring your pig to the Fair in March, you will need a trailer certificate from your Veterinarian stating your trailer has been approved to haul your pig.
- Read your Fair rules and become familiar with the requirements to show your project, such as weigh-in times and dates, show dates and times, work day, etc.
- The ultrasound report will be posted in the downs Building (steer barn) after the final weigh-in. Ask your 4-H Leader or FFA Advisor how to do this if you are not familiar with the report. You will need this information to complete your Project Book.

Weight - How To Weigh Your Pet Pig Without a Scale: If you don’t have a scale, you still can weigh it by using the formula below. You will need a measuring tape. The formula is not exact, but it comes within about three percent of the actual weight. The formula is as follows:

1. **Girth Measurement:** Take the heart-girth measurement. Your measuring tape needs to go around the body just behind the front legs and over the shoulder area. As an example for you, I will use the measurements of Flower. Her girth measurement is 43 inches.
2. **Square the result:** (Multiply the measurement by itself.) Example: The measurement was 43 inches. 43 x 43 = 1,849.
3. **Length Measurement:** Measure the length of your pig. Start at the top of his or her head, right in between the ears, and measure down to the start, or base, of the tail (not the end of the tail). Try to have its head level. Flower's length is 39 inches.
4. **Girth Result x Length:** Take the girth measurement result (in the example above, this was 1,849) and multiply that times the length of your pig. In our example, this would be 1,849 x 39 = 72,111.
5. **Weight Calculation:** Divide this result by 400, and you'll have a weight accurate to within about three percent. In our example, 72,111 divided by 400 = 180 pounds. Factoring in the 3% variance (5.4 pounds), this means Flower weighs between 174.6 and 185.4 pounds.
### GENERAL MARKET HOG PERFORMANCE TRAITS

**Your Project Performance Record: This record is not included in your scoring**

(Complete this section after the Fair. If you received your carcass data from the ultra-sound reading, transfer the results to the corresponding line below.)

- **Final Live Weight**: ________pounds
- **Hanging Carcass Weight (Live Weight x 0.62)**: ________pounds
- **Backfat (last rib)**: ________inch
- **Ribeye Area**: ________square inches
- **Quality Grade**: ________(standard, select, choice, prime)
Swine Project Guide

Many youth who have swine projects hope to raise a champion. While only one animal in a show is named champion, all exhibitors can benefit from the project. You will learn about the swine industry and how to produce a safe, wholesome product. The swine project is the largest livestock project in the state.

Raising and showing a champion pig requires dedication, hard work, and a little luck. Selecting a good animal, providing good facilities, developing a sound feeding and health program, learning showmanship, and paying attention to details every day are all important. Overlooking any one of these areas can prevent you and your pig from making it to the Fair.

Selecting a good animal

The importance of selection cannot be overemphasized. An animal’s genetics largely determine its growth, muscling, and leanness. Youth exhibitors usually select their animals when the pigs are 8 to 10 weeks old and weigh 40 to 80 pounds. The challenge is to try to predict what a 50 to 70 pound feeder pig will look like at market weight, which is about 260 pounds or 6 months of age. If you are able to select the pig closer to 70 pounds, you will have a better chance of predicting how the animal will turn out.

Successful show pigs should have an expressive amount of muscle and shape. Pigs should have a square-ness and width in their top with a groove down the center. Another noticing feature is that the pig (when viewed from the rear) should have an hour glass appearance. This shape gives an indication of the muscle and leanness potential in the pig. The ham should be long, extending as far toward the hock as possible.

Other indicators of future muscling is having a wide set to the hind legs, a flare or concave shape through the center of the ham, and a definite expression or bulging of muscle at the rump (ham-loin junction). The rump indicator is really important. Remember, a narrow set to the hind legs will not likely fill with adequate thickness and expression of muscle. As indicated earlier, a wide base was necessary for growth.

When you are examining a prospective pig, step back from the pig about 10 to 20 feet and watch the animal walk and move. Pigs should take long strides and appear to be comfortable while walking. Many show pigs “goose step” or swing their feet in front of them before placing them on the ground. This is definitely something to avoid. Any problems that are apparent when a pig weighs 50 pounds will probably get worse by the time the animal reaches 250 to 270 pounds.
**Nutrition and Feeding Management**

Genetics, nutrition, environment, and the health of your pig will determine the animal’s growth rate. Most project pigs are fed a grower ration to a weight of 110 to 125 pounds and are then switched to a finishing ration to market weight. A pig’s protein requirements decreases as it grows and matures; consequently, commercial grower rations are higher in protein than finishing rations. In general, commercial rations are balanced to meet the needs of an average pig. Therefore, a pig that is above average for lean and muscle content may perform better if fed the higher protein grower ration to market weight instead of a finishing ration.

**Water** is the most essential of all nutrients. If you use a nipple waterer, check it often to make sure the flow rate is right. Nipple waterers for grower to finish pigs (40 pounds to market weight) should provide 1 quart of water per minute. Fresh, clean water should never be withheld from an animal. Lack of water harms an animal’s health and also causes muscles to lose shape and expression because muscle is made up of mostly water.

How much should I feed my pig? How much should it gain?

<table>
<thead>
<tr>
<th>Pig Weight</th>
<th>Lbs./Day*</th>
<th>Rate of Gain</th>
</tr>
</thead>
<tbody>
<tr>
<td>40-100 lb.</td>
<td>2.5-4</td>

<td>1.75 pounds per day</td>
</tr>
<tr>
<td>160-230 lb.</td>
<td>6-8</td>
<td>2 pounds per day</td>
</tr>
</tbody>
</table>

* Start with smaller amount and increase as animal gets larger.

**Deworming**

Deworm healthy pigs upon arrival and again a month later. Use a dewormer that is effective against whipworms, such as SafeGard® (fenbendazole), at least once. Pigs suffering from diarrheal disease can be especially sensitive to deworming products. Safe-Gard® is probably the least-toxic product for pigs with diarrhea from whipworm infections.

Ivomec® (ivermectin) and Dectomax® (doramectin) are excellent injectable dewormers that also kill lice and mange, but they are not always effective against whipworms.
General Project Book Guidelines

It is suggested that a copy of this Project Book be made for use as a “Work Copy”. Records then can be transferred into this Project Book for a “Final” copy.

1. Your Project Book should begin when you purchase your animal.
2. You may place your Project Book in a folder or plastic sheet protector sheets. 3-ring binders are not recommended.
3. Always double-check your work, especially your math calculations.
4. Have someone check your Project Story for spelling and grammar before you write it in the final Project Book.

Project Terms and Explanations

1. Project Year: Based on a calendar year. Current Project Year is the same as the current Fair.
2. Date Acquired: List the date you obtained this item. On items older than 1 year, the year will be sufficient.
3. Purchase Cost or Value: What did this item cost when you obtained it? (Fair Market Value)
4. Value at Beginning of Project: Same as purchase cost for items purchased in the current calendar year. On items from previous years, this should be the value from last year’s ending inventory or depreciated value of 10% of purchase cost per calendar year.
5. Depreciation of 10%: This will be 10%, per calendar year, of the original purchase cost for the items you still will have at the end of the project. This includes items you had at the beginning of the project as well as items purchased during the current calendar year. Depreciation is the loss in value of your assets and is an expense.
6. Value at the End of the Project: This is the value at the beginning of the project minus the depreciation.

Examples:

<table>
<thead>
<tr>
<th>Item Description</th>

</table>
**Project Inventory**

List all equipment and assets you had at the beginning of the project. After listing existing inventory, you also should list those items you purchased this year that you will keep after the project is finished.

**List items you will keep past the end of this project on this page only** (inventory examples include brushes, feed pans, canes, and pens). Do NOT list expendable items such as shampoo, etc.

Refer to Project Terms and Explanations (Page 7) for descriptions of each column.

Rev. 9/2019
Animal Expense

If animal is purchased by the head, estimate the weight. To calculate the Price per Pound of an animal purchased by the head, divide the cost by the estimated weight.

<table>
<thead>
<tr>
<th>Date</th>
<th>Description</th>
<th>Paid To</th>
<th>Purchases by head? (Yes or No)</th>
<th>Weight</th>
<th>Price per Pound or Head</th>
<th>Total Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Cost of Animal $________________

Non-Feed Expenses

List everything you spend money for that you will NOT have at the end of the project and that is NOT feed or hat. This includes veterinary expenses, wormers, fly sprays, and other expendable items such as shampoo, hoof polish, grooming supplies, film developing, hauling, etc.

<table>
<thead>
<tr>
<th>Date</th>
<th>Cost Per</th>
<th>Description</th>
<th>Total Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example: 100</td>
<td>0.37 mile</td>
<td>Hauling of Animal (to purchase and weigh-ins)</td>
<td>2.50</td>
</tr>
<tr>
<td>Example: 1 bottle</td>
<td>2.50 each</td>
<td>Shampoo</td>
<td>2.00</td>
</tr>
<tr>
<td>Example: 1 cc</td>
<td>2.00 each</td>
<td>Ivomec wormer shot</td>
<td>2.00</td>
</tr>
</tbody>
</table>

For items you will keep past the end of this project, list them only on the Project Inventory table (Page 8). Inventory examples include clippers, steer pens, buildings, and tack.
Feed Expenses

List all feed and supplement or additive expenses on this page (list each feed, supplement or additive purchase separately.)

* IM - Intramuscular: In the muscle; SQ - Subcutaneous: under the skin; O - Orally: In the mouth; T – Topical: Pour-on, top of back.

Weight Records

Keep track of the weight gains of your animal. Be sure to include the beginning weight and your final weight at Fair check-in. If you don’t have access to scales, use a weight tape. You should weigh your animal every two weeks.

** Average Daily Gain can be calculated by taking the pounds gained since last weighing, divided by the number of days since the last weighing.

<table>
<thead>

PROJECT STORY OUTLINE

You will make an outline for your project story first. It should include what you have learned about your animal, safety practices you used, what you could do to improve your project, and the different skills you learned/used during your project. This is an outline form- complete sentences are not required.

!!All outline subtopics must be complete to receive full points!!

I: Introduction - introduce your story and capture your reader’s attention.
What type, breed, weight, etc. did you purchase?
Why did you choose the swine you did – cost, breed, breeder, past successes, etc.

II: What did you learn? (About yourself and/or about your swine?)
A.
B.
C.

III: What safety practices did you use?
A.
B.
C.

IV: What improvements could I make? What would you change or do the same the next time you begin a swine project? For example: different feed, different breed, type, size, etc.
A.
B.
C.

V: What skills did I learn or improve on?
A.
B.
C.

VI: Summary: leave the reader with the idea or impression you want them to have.

Use this outline to write your story.
DEMONSTRATIONS

Did you give any demonstrations related to this project? _____ Yes _____ No

<table>

</tbody>
</table>

PROJECT STORY

Your project story must be developed from your outline. Be sure to use stories to make a point, use examples, use interesting facts and statistics, remember your experience, build strong images by using descriptive words. **Mention demonstration in your story.** Grammar, spelling, and neatness will be noticed by the judges.
