

# Contribute to the **GROWING WATER CONSERVATION ETHIC** in Sarasota County

## SHOWERHEAD PLEDGE

I, \_\_\_\_\_, pledge to **install a water-efficient showerhead** in one of my showers before May 1, 2016.

Low-flow showerheads can **reduce my water consumption by 40 percent**. On average, the installation of a single low-flow showerhead will save **8 gallons/person/day. This savings amounts to 2,920 gallons of water/person/year!**

If every occupied household in Sarasota County installed a water-saving device like this, residents could **save more than 670 million gallons a year!** That equates to a daily savings of **roughly 10 percent of Sarasota County's current daily water consumption.**

My signature below indicates that I have received a complimentary water-efficient showerhead and pledge to install it in my home prior to May 1, 2016 as a part of my participation in Water Conservation Month and to contribute to the growing water conservation ethic in Sarasota County.
